

# Fire Extinguisher Disposal Service

---

We understand that the safe disposal of fire extinguishers isn't a simple process. The correct handling, storing, emptying, disposing, and recycling of units is a complex operation.

We recycle more than 11,500 fire extinguishers per month, with each element recycled and reused.

To learn more about our scrap and recycling service, contact our Customer Care Team with any disposal requirements.

## Service Offering

Please see the following safety protocols that must be adhered to in order to use the CheckFire Disposal Service.

- **All scrap fire extinguishers, both pressurised or unpressurised, must be pinned and tagged prior to being collected or dropped off to our recycling facility.**
- **Scrap that is booked through our collection service must be returned in a CheckFire Transport Crate complete with all collars\* following the below process:**
  - **Each pallet must be safely secured with a minimum of the 3 x collars provided by CheckFire**
  - **Using the second pallet provided by CheckFire, please place it on top to secure the overall crate of scrap fire extinguishers**
  - **Finally, please sufficiently wrap the entire crate with pallet wrap to ensure complete security of the load**
- **Extinguisher Disposal Count Record is completed and returned with scrap units.**
- **We accept scrap fire extinguishers and fire extinguisher cardboard boxes only.**

Due to safety reasons, we will be unable to accept or process any scrap that does not comply with these points. We thank you for your understanding and support.

For more information on our Disposal Service, head over to the [CheckFire website](#) where we discuss the complete journey of the scrap units we recycle, including its final destination!

*\*Transport crates must be returned with all three collars. A fee of £10 per collar will be charged for incomplete collars.*
