All fire extinguishers weighed in accordance with BS5306-3 commissioning and maintenance of portable fire extinguishers.

NTA 8133 is the first viable and standardised publication of testing for portable fire extinguishers on lithium ion battery fires with medium capacities up to 600 Wh. The CommanderEDGE LFX 6ltr and 9ltr fire extinguishers are NTA 8133 approved.

LFX is an effective water-based fire extinguishing agent that is excellent at quickly putting out flames.

LFX is endothermic. It has remarkable heat-absorbing properties that break down the chain reaction in thermal runaway and prevent other cells from overheating.

LFX also protects from secondary A-class fires, and this allows the extinguisher to quickly tackle 'peripheral' fires that have been caused by the exploding batteries.
